

### Example 4

As shown in the figure,  $D$  is the midpoint of  $BC$  of triangle  $ABC$ .  $E$  is on  $AC$  such that  $AC = 3CE$ .  $BE$  and  $AD$  meet at  $G$ . Find the ratio  $AG : GD$ .  
Solution: 4:1.

Draw  $DF \parallel BE$  through  $D$  and meets  $AC$  at  $F$ . Since  $D$  is the midpoint of  $BC$ ,  $F$  is the midpoint of  $EC$ . Since  $AC = 3CE$ ,  $AE = 2CE = 4EF$ .  
We also know that  $DF \parallel BE$ . So  $AG : GD = AE : EF = 4 : 1$ .
